2. Precautions in handling

2-1. Installation environment

(1) Although the high weather-proof electronic display is adopted, in case of installation at a place subjected to direct.

(2) Do not install the flow meter at a place with much electromagnetic noise or in corrosive atmosphere.

(3) This product is designed for outdoor installation, but avoid areas where there is a risk of water submergence and water always splashes.

(4) When opening or closing a valve before and after the flow meter, open or close the valve not all at once but gradually.

2-2. Piping conditions

(1) To realize stable measurement, it is recommended to install a straight pipe portion of 20 D or more (D: nominal diameter) at the upstream and downstream sides of the flow meter.

(2) In case large amount of mist, dust, etc., are contained in the fluid, install the flow meter by vertical piping. In the case of horizontal piping, install the flow meter so that the display part faces upward.

(3) In case installation of the product near a pressure reducing valve or a flow adjusting valve is planned, contact us in advance.
